AMENDMENTS TO THE CLAIMS

Please amend claims 1, 4, 7, 11, 12, 13, 18, 20, 21, 23, 28, 30, 31, 32 and 33 as shown

below. All pending claims are reproduced below, including those that remain unchanged.

1. (Currently Amended) A computer-enabled system embodied in a storage medium to provide

a software debugging environment, comprising:

an executing software program containing at least one data structure;

at least one abstract view capable of displaying and/or editing at least one abstract content

of the at least one data structure, wherein the abstract content of the at least one data

structure constitutes attributes of interest during the execution of the executing software

program rather than underlying physical data structures used to represent the abstract

at least one filter capable of extracting and formatting the contents of interest from the

underlying physical data structures and defining a displaying and/or editing property of

the at least one abstract view, such property can include at least one of: which of the at

least one abstract content is displayed, a format in which it is displayed, and how it is

edited

content; and

2. (Original) The system according to claim 1, wherein:

the system is at least partially implemented using Java language.

(Original) The system according to claim 1, further comprising:

at least one editor associated with the at least one abstract view capable of at least one of:

allowing the at least one abstract content to be modified through the at least one

abstract view; and

validating an input value to the at least one abstract content against an allowed

value for the at least one abstract content

4. (Currently Amended) The system according to claim 1, wherein further comprising:

Reply to Office Action dated: May 12, 2008

Reply dated: August 8, 2008

the at least one another abstract view is capable of presenting the at least one another abstract content of the at least one data structure without showing a physical implementation of the at least one data structure.

5. (Original) The system according to claim 1, wherein:

each of the at least one abstract view can be individually selected for display.

(Original) The system according to claim 1, wherein:

Two or more of the at least one abstract view are capable of displaying and/or editing the same one of the at least one abstract content without being deadlocked.

7. (Currently Amended) The system according to claim 1, wherein:

the at least one filter can be defined via configuration information stored in a file, which can be an XML file in a markup language.

8. (Original) The system according to claim 1, further comprising:

a component capable of interactively performing at least one of:

selecting a subset of the at least one of abstract view for display; and

defining the displaying and/or editing property of the at least one filter.

9. (Original) The system according to claim 8, wherein:

the component can be realized via an interface to an Integrated Development Environment (IDE).

10. (Original) The system according to claim 1, further comprising:

at least one component capable of supporting the debugging of a JSP page and a machine generated servlet that implements the JSP page.

11. (Currently Amended) The system according to claim 10, wherein:

the at least one component can perform at least one of:

Reply to Office Action dated: May 12, 2008

Reply dated: August 8, 2008

extracting and displaying a code and/or a content of interest, and mapping them to

a format used in a source code in a JSP server page, for use with executing a JSP

servlet;

following an execution path through at least one level of redirection using at least

one tag;

extracting and manipulating a streaming data from a content of a buffer used to

transmit and receive the streaming data; and

setting at least one break point in a JSP server page and stepping through the

execution of the page based on the displaying property.

12. (Currently Amended) The system according to claim 11, wherein:

the streaming data can be extracted by inserting a wrapper or "writer" class around the

JSP servlet.

13. (Currently Amended) A method to provide a software debugging environment, comprising:

displaying and/or editing at least one abstract content of at least one data structure in an

executing software program via at least one abstract view, wherein the abstract content of

the at least one data structure constitutes attributes of interest during the execution of the executing software program rather than underlying physical data structures used to

represent the abstract content; and

extracting and formatting the contents of interest from the underlying physical data

structures and defining a displaying and/or editing property of the at least one abstract

view via at least one filter, such property can include at least one of: which of the at least

one abstract content is displayed, a format in which it is displayed, and how it is edited.

14. (Original) The method according to claim 13, further comprising:

allowing the at least one abstract content to be modified through the at least one abstract

view; and

validating an input value to the at least one content against an allowed value for the at

least one content.

1

Reply dated: August 8, 2008

15. (Original) The method according to claim 13, further comprising:

presenting the at least one abstract content of the at least one data structure without showing a physical implementation of the at least one data structure.

16. (Original) The method according to claim 13, further comprising:

selecting each of the at least one abstract view individually for display.

17. (Original) The method according to claim 13, further comprising:

displaying and/or editing the same one of the at least one abstract content via two or more

of the at least one abstract view without being deadlocked.

18. (Currently Amended) The method according to claim 13, further comprising:

defining the at least one filter via configuration information stored in a file, which can be

an XML file in a markup language.

19. (Original) The method according to claim 13, further comprising:

interactively performing at least one of:

selecting a subset of the at least one of abstract view for display; and

defining the displaying and/or editing property of the at least one filter.

20. (Currently Amended) The method according to claim 13, further comprising:

supporting the debugging of a JSP server page and a machine generated servlet that

implements the JSP server page.

21. (Currently Amended) The method according to claim 20, further comprising:

extracting and displaying a code and/or a content of interest, and mapping them to a

format used in a source code in a JSP server page, for use with executing a JSP servlet:

following an execution path through at least one level of redirection using at least one

tag;

Reply dated: August 8, 2008

extracting and manipulating a streaming data from a content of a buffer used to transmit

and receive the streaming data; and

setting at least one break point in a JSP server page and stepping through the execution of

the page based on the displaying property.

22. (Original) The method according to claim 21, wherein:

the streaming data can be extracted by inserting a wrapper or "writer" class around the

JSP servlet.

23. (Currently Amended) A machine readable medium having instructions stored thereon that

when executed by a processor cause a system to:

display and/or edit at least one abstract content of at least one data structure in an

executing software program via at least one abstract view, wherein the abstract content of

the at least one data structure constitutes attributes of interest during the execution of the

executing software program rather than underlying physical data structures used to

represent the abstract content; and

extract and format the contents of interest from the underlying physical data structures

and define a displaying and/or editing property of the at least one abstract view via at least one filter, such property can include at least one of: which of the at least one abstract

content is displayed, a format in which it is displayed, and how it is edited.

24. (Original) The machine readable medium of claim 23, further comprising instructions that

when executed cause the system to:

allow the at least one abstract content to be modified through the at least one abstract

view; and

validate an input value to the at least one abstract content against an allowed value for the

at least one content.

25. (Original) The machine readable medium of claim 23, further comprising instructions that

when executed cause the system to:

Reply to Office Action dated: May 12, 2008

Reply dated: August 8, 2008

present the at least one abstract content of the at least one data structure without showing an physical implementation of the at least one data structure.

26. (Original) The machine readable medium of claim 23, further comprising instructions that when executed cause the system to:

select each of the at least one abstract view individually for display.

27. (Original) The machine readable medium of claim 23, further comprising instructions that when executed cause the system to:

display and/or edit the same one of the at least one abstract content via two or more of the at least one abstract view without being deadlocked.

28. (Currently Amended) The machine readable medium of claim 23, further comprising instructions that when executed cause the system to:

define the at least one filter via configuration information stored in a file, which can be an XML file in a markup language.

29. (Original) The machine readable medium of claim 23, further comprising instructions that when executed cause the system to:

interactively perform at least one of:

selecting a subset of the at least one of abstract view for display; and

defining the displaying and/or editing property of the at least one filter.

30. (Currently Amended) The machine readable medium of claim 23 further comprising instructions that when executed cause the system to:

support the debugging of a JSP server page and a machine generated servlet that implements the JSP server page.

31. (Currently Amended) The machine readable medium of claim 30, further comprising instructions that when executed cause the system to:

Reply to Office Action dated: May 12, 2008

Reply dated: August 8, 2008

extract and display a code and/or a content of interest, and mapping them to a format

used in a source code in a JSP server page, for use with executing a JSP servlet;

follow an execution path through at least one level of redirection using at least one tag:

extract and manipulate a streaming data from a content of a buffer used to transmit and

receive the streaming data; and

set at least one break point in a JSP server page and step through the execution of the

page based on the displaying property.

32. (Currently Amended) The machine readable medium of claim 31, wherein:

the streaming data can be extracted by inserting a wrapper or "writer" class around the

JSP servlet.

33. (Currently Amended) A computer-enabled system embodied in a storage medium to provide

a software debugging environment, comprising:

means for displaying and/or editing at least one abstract content of at least one data

structure in an executing software program via at least one abstract view, wherein the

abstract content of the at least one data structure constitutes attributes of interest during the execution of the executing software program rather than underlying physical data

structures used to represent the abstract content; and

means for extracting and formatting the contents of interest from the underlying physical

hears for extracting and formatting the contents of interest from the underlying physical

data structures and defining a displaying and/or editing property of the at least one

abstract view via at least one filter, such property can include at least one of: which of the at least one abstract content is displayed, a format in which it is displayed, and how it is

edited.

34. (Canceled).
